Professional Summary

Computer Science undergraduate focused on **Backend and Cloud/DevOps engineering**, with hands-on experience building cloud-native systems using FastAPI, Docker, Kubernetes, CI/CD, and cloud platforms, plus contributions to Kubeflow open source.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C++
Backend: FastAPI, Node.js, REST APIs, Microservices, PostgreSQL, MySQL, PyTest
Cloud & DevOps: AWS, GCP, Docker, Kubernetes, Helm, Terraform, CI/CD, GitHub Actions, Jenkins, Linux, Bash
Observability: Prometheus, Grafana, Monitoring, Observability, Unit Testing
Frontend & Tools: React, Next.js, Git, GitHub

Experience

DevOps & Full-Stack Engineer Intern Jun 2026 – Aug 2026
Real IT Solutions Remote

- **Improved deployment reliability across 3+ deployments** by automating CI/CD workflows with **GitHub Actions, Jenkins, Bash, and Docker**, troubleshooting Dockerfiles, build scripts, containers, and deployment failures.
- **Modernized 10+ REST endpoints** by migrating backend functionality from **Spring Boot microservices to FastAPI**, implementing requirements from PRD/FRD documentation with the development team.
- **Strengthened backend reliability and observability** by diagnosing session, HTTP 404, database, REST API, and Axios timeout issues; monitored services with **Prometheus/Grafana** and validated changes using **PyTest and unit testing**.
- **Improved cross-device usability** by redesigning frontend interfaces and implementing responsive layouts while coordinating changes across frontend, backend, and database layers.

Projects

Kubernetes Auto-Scaling Intelligence Engine (KubASIE) GitHub Feb 2026

- **Built a predictive Kubernetes autoscaling engine** that forecasts workload demand up to **60 minutes ahead** using **PyTorch LSTM and Prophet** and translates predictions into Horizontal Pod Autoscaler decisions.
- **Engineered a containerized cloud-native architecture** with a FastAPI policy service, React/Vite observability dashboard, Docker packaging, and Helm-based Kubernetes deployment.

kf-probe – Kubernetes Workflow Health Probe GitHub Mar 2025

- **Built a concurrent CLI monitoring tool** for Kubernetes and Argo Workflows to inspect workflow health, DAG execution states, and runtime status.
- Added **watch mode, Kubernetes label filtering, JSON/YAML output, and Docker deployment support** for scriptable workflow monitoring.

Portfolio Website GitHub | Live Sep 2025

React/TypeScript portfolio with reusable components, responsive layouts, and production deployment.

Open-Source Contributions

Kubeflow (CNCF ecosystem) website PR #4326 | pipelines PR #12989

- **Merged contribution to kubeflow/website (PR #4326):** implemented dynamic GitHub star fetching for the Kubeflow homepage through the project's contributor review workflow.
- **Contributed to kubeflow/pipelines (PR #12989):** added environment-variable support for pod lifecycle timeout settings, extending configuration flexibility in a production-scale cloud-native ML codebase.

Education

B.Tech in Computer Science Engineering Expected 2027
Amity University Jharkhand CGPA: 7.66/10

Certifications

AWS Training & Certification: Cloud Practitioner Essentials (2026)
Google Cloud: Manage Kubernetes in Google Cloud (2025) | Secure Cloud Network Skill Badge (2025) | App Development Environment (2024)
